SHADES REQUIRING PRIOR APPLICATION OF A TINTED UNIVERSAL PRIMER
To guarantee the quality and depth of color that Ressource paints are known for, some of them must be applied over an Universal Primer that has been tinted in the chosen shade.

PRÉCONISATIONS DE L'ADDITIF POUR LES TEINTES DE CHAUX
ADDITIVE FOR LIME PAINT RECOMMENDATIONS

RESSOURCE

Le temps de séchage et la hauteur de ton ont une influence importante sur les nuances finales de l'application.
Afin d'obtenir un rendu doux et subtil, il peut être conseillé d'ajouter l'additif pour Peinture à la Chaux Ressource. Vous retrouverez dans ce tableau nos préconisations selon la teinte et l'effet choisis.

Attention : Ressource déconseille fortement d'appliquer de la Peinture à la Chaux dans une pièce excédant 25°C.
Pour une température supérieure à 20°C, l'ajout de l'additif pour Peinture à la Chaux facilitera l'application en retardant le temps de séchage de la chaux, indépendamment de la teinte choisie.
NB : Les valeurs exprimées en % sont indiquées par litre de Peinture à la Chaux. En gris l'effet préconisé par Ressource.

For soft and subtle results, we recommend you to dilute the Lime Paint with our additive for lime paint before application according to the shade and the effect (see table below).

Important : In order to ensure the result, we recommend you to apply the lime paint under 77°F (25°C). For applications above 68°F (20°C), we recommend the addition of lime additive to delay the drying time regardless the chosen shade.
NB : Values in % by lime paint liter. Highlighted in grey, our effect recommendations.
